

Description Of Caseload Types

Caseload - Caseloads determine what individuals users are able to access.

The Therap System has the following types of caseloads : **AIC** (All Individual Caseload), **APC** (Auto Program Caseload), **Individual** Based Caseload and **Group** Caseload.

In the case of **AIC**, If you admit at least one individual in the system, the AIC (All Individual Caseload) will be **auto generated**. It gives users access to all the individuals that are under a particular provider. Users need not assign a separate Caseload to a user who has the **::AIC::** Caseload as he/she will have access to all the individuals.

In the case of **APC**, after creating a program in the system, an APC (Auto Program Caseload) will be **auto generated for that program**.

AIC and **APC** types are **created** for you **automatically** by the system. In the cases of **Individual** or **Group Caseload**, users assigned with the **Caseload** role can create Individual or Group Caseloads if needed.

If you want to learn how to create Individual or Group Caseload, click [here](#).

Caseload List

(1 of 6) [Navigation Buttons]			
Caseload	Caseload Type	Action

Descriptions for each of the above Caseload types are given below :

Caseload Types	Description
All Individual Caseload (::AIC::)	All Individual Caseload (AIC) will allow access to all individuals in the system including those that have been discharged or marked deceased.
Auto Program Caseload (::APC::)	Auto Program Caseload (APC) includes all individuals enrolled within that particular program
Individual Based Caseload	An Individual Based caseload consists of one or more individuals.
Group Caseload	A Group Caseload is a collection of Auto Program Caseloads (APC) and Individual Based Caseloads.
