

ISP Program Management (Create ISP Program)

.ISP program management is a critical component of providing high-quality care. It involves creating, managing, and updating Individual Support Plans (ISP) for each individual. The ISP is a document that outlines the individual's needs, goals, and the services and supports they require to achieve those goals. It is a living document that is updated as the individual's needs and goals change over time.

.The ISP program management process includes creating new ISP programs, reviewing existing programs, and updating programs as needed. It also involves monitoring the progress of individuals and reporting on the effectiveness of the programs.

1. To create a new ISP program, you will need to select the individual for whom you are creating the program. This is done in the Care section of the system.

To Do	Care	
Individual	T-Log	New Search Archive
Health	ISP Data	New Search Report Search Report Dashboard
Agency	ISP Program	New Search Acknowledgement Report
Billing	ISP Program Template Library	New Draft Approved Search

2. The next step is to create a new ISP program for the selected individual. This is done by clicking on the "New" link in the "ISP Program" row of the Care section.
